

Since subscribing to XM Satellite Radio, I have enjoyed immensely the variety, quality, and choice that satellite radio provides with NO advertising or interruptions--just the music I love! Since my husband and I choose to pay for this service, I feel that I should be able to choose what I want to listen to on radio and what I do not. It is especially beneficial when travelling to be able to get current weather forecasts and updates and notification of traffic problems no matter where we are. Since the XM stations are not "local" stations in the traditional sense, it is very beneficial to have access to local traffic and weather information when travelling to unfamiliar places. It is often difficult to find and receive commercial stations when travelling. Therefore, I urge you to reject NAB's petition 04-160. Thank you for the opportunity to express my concerns.
